4-5 pm
411 West Hall

tDAR is an international digital repository with information about archaeological investigations, research, and resources. tDAR provides new tools to discover, access, integrate, and preserve relevant archaeological information.

Find, share, and use: documents; data sets; images 3-D scans; resources from all over the world; over 100 years of reports; data sets covering fauna, pollen, ceramics, radiocarbon, and dendrochronological analysis; research and comparative collections of ancient and historic artifacts.

tDAR is a service of Digital Antiquity, an organization devoted to providing access to archaeological information and ensuring its preservation.
